

FLOWRx Data Intelligence

Invaluable Insights for more Informed Decisions

With pharmacies becoming more digital they are processing more data than ever before.

This data has the potential to become incredibly useful for your business.

Being able to view and use the right kind of analytics from this plethora of data is key to unlocking further performance improvements for your business.

FLOWRx features a suite of reports to help you analyse data from your FLOWRx system, providing you with invaluable insights to make more informed business decisions.

The data intelligence will help you predict and prioritise areas for improvement so you can fine-tune your pharmacy operations and workflows.

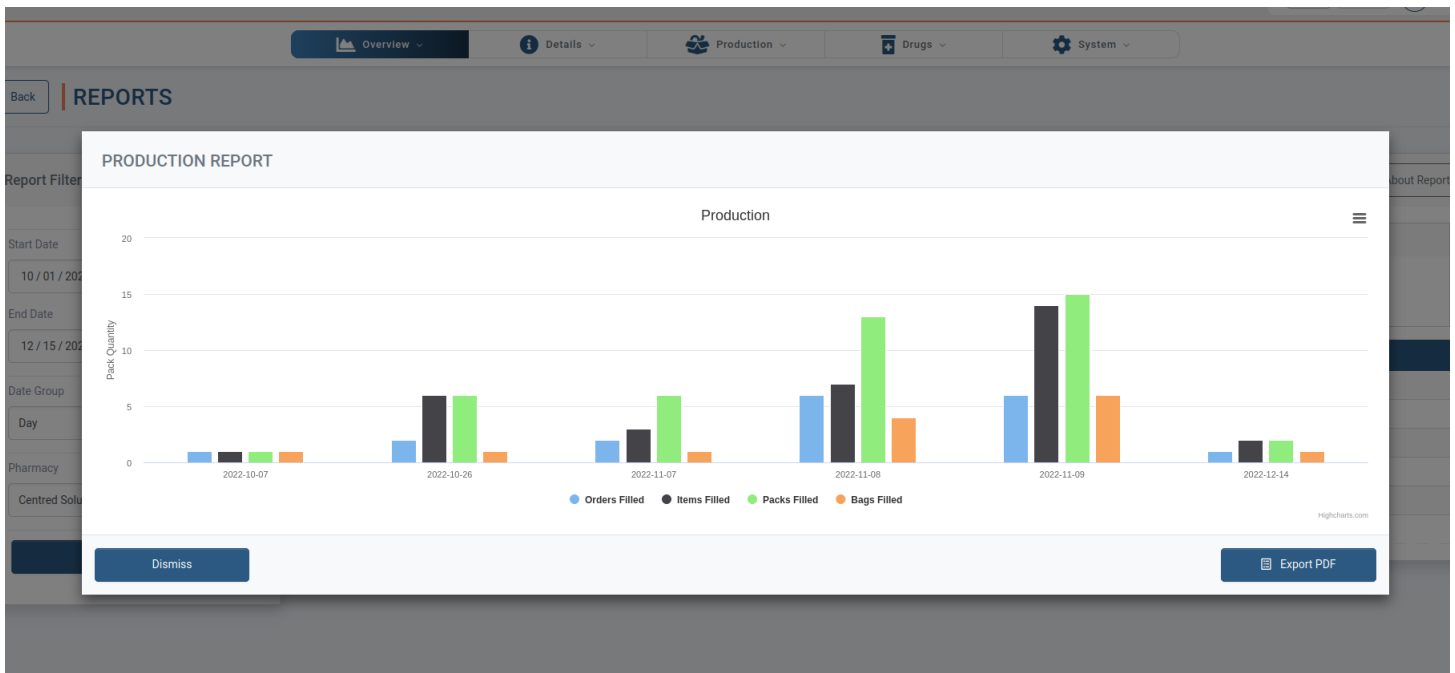

Image: Example FLOWRx Report

Report Type	Description
Drug Demand Report	Provides visibility on which medications, and at what volumes, are being requested from your pharmacy stores to be fulfilled by the hub.
Drug Fulfilment Report	Provides insight on the overall quantity of drugs requested and then break this down by how many were dispensed and how many were not supplied.
Drug Movement Report	Insight on brand of medication dispensed in your hub. Listed by AMPP so you see the specific brand of medication dispensed, type and strength.
Dubious Drug Codes Report	View all anomaly barcodes in one place by highlighting any package codes and barcodes in an unusual format.
Duplicate Barcode Report	Displays barcodes duplicated among multiple package codes so you can verify if drug-barcode relationships are correct and remove duplicates.
ALU Labelling Report	Provides a general indication on ALU performance including breakdown of which packs have and haven't been labelled.
Manual Label Report	Provides data on drugs manually labelled at the hub by drug name, drug code and barcodes scanned. Also allows you to ID the volume of packs with no barcode.
Interface Rejected Items	Identifies items rejected from the PMR interface as they are unable to be processed by the hub.
Pack Track Activity Report	Displays number of each pack track activity over a specified timeframe and is general indicator of ALU activity.
Production Report	Shows items, packs and bags filled at pharmacy or hub in a specified timeframe.
Sortation Report	Displays the number of packs sorted and method of sortation, indicating how many packs were successfully sorted to light on the sortation shelf.
Pack Overrides Report	Shows pack overrides by drug name, drug code and the barcode scanned for the override.
Quarantined Drugs Report	Identifies medication sent to quarantine and reason.
Quarantined Flag Report	Highlights number of quarantine flags and number of bags in quarantine providing you with insight on most frequent quarantine events.
Storage Robot Denied Barcodes Report	Shows a list of items not permitted for loading into the RDS via FLOWRx interface.
Storage Robot Performance Overview Report	Provides overview of your RDS' success or failure to supply packs ordered by FLOWRx.
User Report	Displays packs and bags filled by a specific user.
